

## Solution 11 – Stabilization buffer 910-3011 100 ml

**Contents** Solution 11 - Stabilization buffer (100 ml).

Solution 11 - Stabilization buffer is a weak alkaline aqueous solution of inorganic base.

The pH value is in the range of 8.00 - 9.00.

**Application** Solution 11 - Stabilization buffer is used to neutralize weak acidic solutions particularly

important for DNA quantification.

**Principle** Solution 11 - Stabilization buffer facilitates precise DNA content quantification of

> acidic cell samples by raising the pH. Neutralization of acidic cell samples is important for DNA stabilization, and it potentiates the fluorescent signals of various dyes, including as 4',6-diamidino-2-phenylindole (DAPI) and propidium iodide (PI).

The solution is for research use only (RUO) and is not for diagnostic or therapeutic uses. Use

Storage Store at 2-8°C.

Stability Unopened bottles can be stored until the expiry date indicated on the bottle. The

solution is produced 15 months prior to the expiry date.

We recommend using the solution no later than the expiry date or two (2) months after

opening the bottle, whichever comes first.

Safety In case of contact with eyes, rinse immediately with plenty of water and seek medical information

advice. If a spill is observed, perform a clean-up of the area which may have been in

contact with the solution.

Use gloves and suitable protective clothing.

Please also refer to the safety data sheet (SDS) for safety information.

Disposal After use, dispose of the bottle following national or local laws and regulations,

according to the nature of its contents.

System ID: 10226
