

1 ml

910-3012 Solution 12 - DAPI

Contents Solution 12 - DAPI (1 ml). The solution contains 4',6-diamidino-2-phenylindole (DAPI; 500 μ g/ml ~ 1,4 mM ~ 0.05%) and sodium azide (NaN₃; 0.1 mg/ml \sim 1.5 mM \sim 0.01 %). The EINECS no. for DAPI is 249-186-7. The EINECS no. for NaN₃ is 247-852-1. Application Solution 12 - DAPI stains nucleic acids of fixed and permeabilized cells. DAPI is used for quantification of DNA content of e.g., animal cells allowing determination of G₀/G₁, S, and G_2/M cell cycle phases. Principle Solution 12 - DAPI is a competent dye for the measurement of cell cycle stages. The fluorescence intensity of DAPI-stained cell is in stoichiometric relationship to the DNA content. For accurate DNA content measurements, it is a prerequisite that the cells are fixed/permeabilized prior to DAPI staining. Use The solution is for research use only (RUO) and is not for diagnostic or therapeutic uses. Storage Store at 2-8°C. Stability Unopened microtubes can be stored until the expiry date indicated on the microtubes. The solution is produced 15 months prior to the expiry date. We recommend using the solution no later than the expiry date or two (2) months after opening the microtubes, whichever comes first. Safety In case of contact with eyes, rinse immediately with plenty of water and seek medical information advice. If a spill is observed, perform a clean-up of the area which may have been in contact with the solution. Use gloves and suitable protective clothing. Please also refer to the safety data sheet (SDS) for safety information. Disposal After use, dispose of the microtube following national or local laws and regulations, according to the nature of its contents.
